The major challenge is to stabilize the yields of the Noir de Bourgogne variety. Even in favorable climatic conditions, the yields are random. Different tracks have been studied:</p> <ul style="list-style-type: none"> • genetic improvement, • plant sanitation, • evolution of agronomic management <p>Finally, a prospective research to make recognize the know-how of the production of blackcurrant buds in Burgundy was planned. The goal is to secure this niche production on our territory.</p> <p>OG: Durability and Development of the Blackcurrant production in Burgundy area, France - phase 2: In Burgundy, the blackcurrant variety “Noir de Bourgogne” is known for its organoleptic qualities to make the “Crème de Cassis” liquor. It has heterogeneous yields because of its low fertility and sensitivity to biotic and abiotic stresses (April frosts). Climate change and the increasing of</p>

	<p>scale populations are problematic. The interprofessional association "Les Acteurs du Cassis" is surrounded by several technical and scientific partners. Agroecological and sanitary protection actions will help to stabilize yields quickly. In the long term, breeding of new varieties is identified as a promising solution.</p> <p>Adresse / Address: Chamber of Agriculture 1, rue des Coulots - 21110 BRETENIERE</p>
